Executive Education Program

CEO-level training in finance, capital markets, and corporate strategy.

Structure

Three levels, built in order. Level I is the foundation: finance and capital markets. Levels II and III add banking, corporate control, and strategy once the base is solid.

Level I - Finance & Capital Markets

• **Architecture of capital markets** - primary vs secondary, equity vs debt, derivatives, money markets.

• **Mechanics of trading** - order book, bid/ask spread, order types, market makers, liquidity, slippage.

• **Market participants** - institutional investors, hedge funds, sovereign funds, corporations, retail.

• **Macro & markets** - how rates, inflation and policy move asset prices.

• **Equities & bonds** - valuation, yield, risk.

• **Derivatives** - options, futures, hedging.

• **Portfolio theory** - risk, diversification, risk-adjusted return.

• **Valuation** - DCF, multiples, reading financial statements.

• **Corporate events** - IPO, M&A, private equity.

Level II - Banking & Corporate Control

• Banking systems, credit, capital adequacy, systemic risk.

• Corporate governance - the board, committees, voting structures.

• Shareholder agreements and control: who really runs a company.

• Defensive tools - poison pills, proxy fights.

Level III - Strategy & Synthesis

• Capital allocation and value creation.

• Competitive strategy and moats.

• Deal structuring and negotiation at board level.

• Putting finance, law and strategy into one decision-making frame.

Method

• Learn by principle, then apply to a real case (2008, Flash Crash 2010, GameStop 2021).

• Every concept is tied to how it is used in a real document or decision.

• Terminology is practiced in context, not memorized as lists.

• Depth over speed - master the base before moving up.

Progress markers

• You ask questions to go deeper, not to simplify.

• You read a 10-K, a term sheet or a cap table without panic.

• You can explain a market event in the language of capital and incentives.
